

Non-invasive and cost-effective energy efficiency retrofits

Faster installation, integration and payback. **CAN2GO** ✓

CAN2GO building automation system for schools & campus

Energy savings

CAN2GO is a simple and cost-effective solution that will reduce your energy costs by improving control over your HVAC and lighting systems according to class schedules and outside weather.

> More control = Reduced consumption = More savings

Student, teacher & staff comfort

Not too hot, not too cold. Keep your students focused on learning and your teachers focused on teaching by making their environment more comfortable. Manage each class and area according to its real use.

> More control = More comfort = Happy staff & students

No dust hazards, no disturbance

How old are your buildings? Are you sure there are no dangerous materials, such as asbestos, in your walls? With CAN2GO's wireless capabilities, you can add control without opening walls & ceilings.

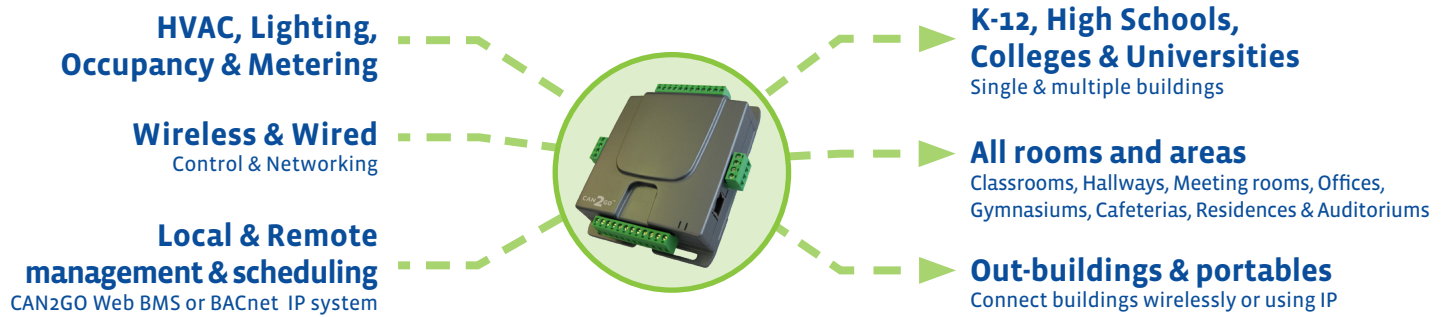

> Wireless = No hazards = Safe students & staff

Save big thanks to wireless

By maximizing the use of wireless technology, CAN2GO installations limit electrical and repair work to a minimum. This means you save big on specialized labor and materials.

> Lower costs + Less labor = Shorter payback

One school, One man, One day

Can a school deployment be done in a single day?

In a 15,000 sq.ft. K-12 school, it took only one day for a single technician to install all the controllers and actuators necessary to control the school's heating system. Every device communicates wirelessly with each other and are ready to be programmed locally or remotely via the LAN or a secure internet connection. No walls or ceilings were opened. Classes weren't disturbed. That's the power of CAN2GO.

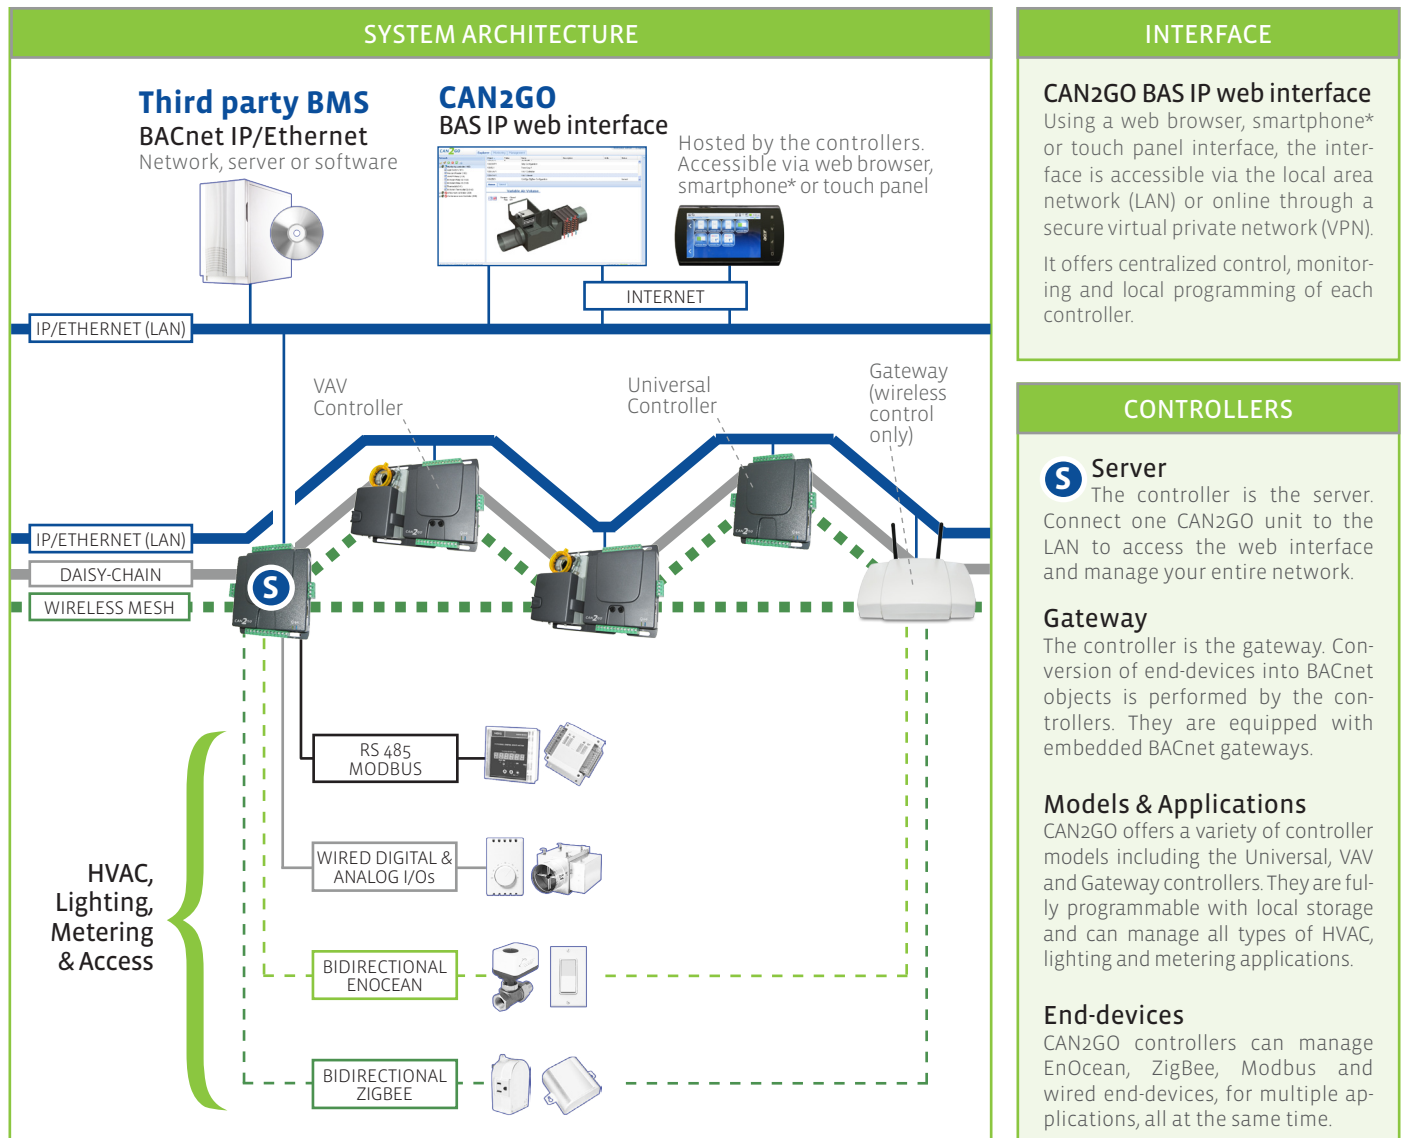

Building automation's missing link™

More energy savings with less downtime. **CAN2GO** ✓

CAN2GO System architecture

CAN2GO can be used as stand-alone solution complete with programmable controllers and a web interface. It can also be integrated with third party BACnet IP/Ethernet building automation systems for property room addition and retrofitting.
